FOR IMMEDIATE RELEASE

droneSim Pro Announces Expansion of Service Offerings

Poolesville, Maryland, March 31, 2016 - droneSim Pro, a fast growing start-up company, is proud to announce the availability of customized solutions to create specific scenarios and drones for their drone flight simulator.

droneSim Pro is a drone simulator designed and built on the real world physics of drone flight. The simulator offers the unique capability to accurately recreate any real life situation or landscape, and allows pilots to train and practice their flying skills in the safety of the simulator. The ability to create an environment specific to a pilot's needs is a game-changer in drone flight training and greatly enhances the quality of the experience.

The use of drones is especially helpful in the public safety arena, where drones can dramatically reduce the risk of harm to first responders.

"The simulator comes standard with a house fire scenario", says Jason Hershcopf, president and co-founder of the company, "but with our modular software we can create any scenario according to specific training needs, whether it's to recreate a technical rescue, HAZMAT, accident investigation, suspect tracking, tactical or other incident types.

"We believe that drones are the future in public safety", he continues, "because with years of experience as a paramedic myself, I believe that responder safety is a priority."

The simulator has recently been ranked #2 by Dronethusiast in a test with other drone simulators from around the world, and the company's ambitious goal is to soon become #1, in terms of quality and copies sold.

For more information about droneSim Pro visit www.droneSimPro.com, or contact sales@droneSimPro.com.

droneSim Pro is a Maryland based company promoting the safe and responsible use of drones in all industries.
