

Setting the **New Industry Standard**

**SMART-SKIN™**

RAM - Apple iPad Air Docking Station with  
Smart-Skin - Technology

# Smart-Skin™ for the iPad Air.

Connection, protection, and a new way to think about tablet and smartphone docking, **forever.**

## Introducing Smart-Skin™ by RAM® for the iPad Air.

Smart-Skin™ by RAM brings a global industry first to market setting a new standard in tablet and smartphone mounting and protection. The rubberized skin will bring drop protection to your tablet also protecting from scratches and other debris which may damage your device. The Smart-Skin™ features an integrated connector which is molded directly into the skin. This prevents damage to the connector on your device from repetitious docking and undocking.

On the exterior of the skin are molded ruggedized docking contacts designed for repetitive docking and undocking common in field applications. Paired with the universal Tough-Dock™ offering power and port expansion to the tablet, your system will be scalable with the evolution of devices as you'll only need to replace the skin should you move to a different version of the iPad. Add another Tough-Dock™ in your office and flawlessly flow between field and office operations saving time and money.

# Add Instant access to ethernet, audio, USB, and charging with one port.

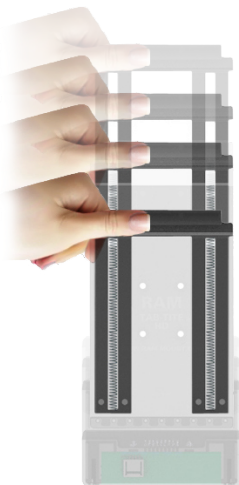

## Seamless Integrated Device Protection and Docking Solution

The low profile Smart-Skin™ installs on your tablet quickly and easily protecting your device while enabling quick and easy docking in both vehicle and office environments. The Smart-Skin™ features an integrated hand strap for better utilization of the tablet while not docked. The Tough-Dock™ is compatible with the Smart-Skin™ and offers power and expanded ports without the need to remove the skin from your device.

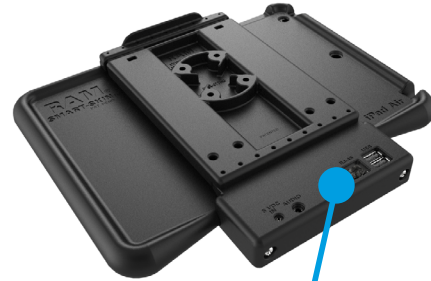

## Swift One Handed Operation

The RAM Tough-Dock™ features a spring loaded mechanism which enables the quick, one handed removal of the docked device. Quickly remove the tablet when exiting your vehicle and easily dock with one handed operation. Ideally suited for professional applications requiring quick and easy access on the move.

Spring Loaded  
locking for easy  
docking and  
removal

(1 qty) DC Input  
(1 qty) Audio Output  
(1 qty) RJ45 Ethernet  
(2 qty) USB 2.0

## Feature Rich Port Replication

Offering a diverse selection of I/O capabilities as well as power, the RAM Tough-Dock™ assures the mobile professional can get the most productivity from their tablet. Whether connecting a keyboard or mouse, an Ethernet cable for network access or an external speaker for turn by turn directions, the Tough-Dock™ will support a wide variety of use cases.

## Available in Locking & Non-Locking Configurations

The RAM Tough-Dock™ is available with a keyed lock to provide an added level of security for the docked device. The locking version features a simple lever system to dock the tablet, with a key to lock the device securely in the dock. If no lock is desired, RAM offers a non-locking version that offers quick and easy access to the tablet with minimal effort. Depending on the needs of the customer, RAM offers a variety of solutions certain to meet all requirements.
